This year's report concludes that renewables are the "most cost-competitive form of generation," even without subsidies. "As such, renewable energy will continue to play a key role in the...

American energy policy is locked in a battle between people who say renewables will make electricity less expensive and people who say they won't, but both sides have it wrong.

But while direct costs for wind and solar are dropping, they remain expensive due in part to the backup energy sources required when renewables are not available. In short, an "affordable" ...

Solar energy is one solution for combating climate change and reducing our dependence on fossil fuels. The cost of solar technology has steadily declined, making it increasingly feasible...

The steady progression of scientific achievements are making wind and solar as cost-efficient to produce as fossil fuels, and increasingly competitive at storing energy as well.

Making electricity from renewable sources such as solar and wind, rather than by burning fossil fuels like coal and gas, is crucial to address climate change. Would switching entirely ...

But solar electricity costs about seven times more than its most direct competitor, electricity generated using natural gas. State and federal subsidies reduce the cost of solar to two ...

Use this solar panel calculator to quickly estimate your solar potential and savings by address. Estimates are based on your roof, electricity bill, and actual offers in your area.
