China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility-scale solar capacity installed in the United States at the end of ...

In 2024, China generated 4% of its total electricity from nuclear power, reaching 444TWh, a 2.2% y-o-y increase. December alone saw China generate 42TWh of electricity from nuclear power, +11.4 % y-o-y.

Solar capacity additions set new records due to a rush before a June policy change, with 212 gigawatts (GW) added in the first half of the year. This rush means solar is likely to set an annual ...

Wind and solar power surpassed thermal power in terms of installed capacity for the first time ever in the first quarter of last year. As of March. 31, 2025, China's installed capacity of wind and ...

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn
