Solar, wind, hydroelectric, biomass, and geothermal power can provide energy without the planet-warming effects of fossil fuels.

Renewable energy (also called green energy) is energy made from renewable natural resources that are replenished on a human timescale. The most widely used renewable energy types are solar energy, ...

Renewable energy is energy that has been derived from earth's natural resources that are not finite or exhaustible, such as wind and sunlight. Renewable energy is an alternative to the ...

We've taken a look at some of the top renewable energy sources -- solar and wind among them -- examining the pros, cons and some of the companies using them

Renewable energy means energy that's different to the most commonly used non-sustainable sources - like gas. Currently the most popular energy sources are: Solar energy Wind ...

The main types of renewable energy are wind, solar, geothermal, hydro, biomass, and tidal energy. Renewable energy is useful energy that regenerates naturally within a relative short span of ...

Summary Overview Mainstream technologies Emerging technologies Comparison of the theoretical and practical potentials of different renewable energy technologies Market and industry trends Policy Finance Renewable energy (also called green energy) is energy made from renewable natural resources that are replenished on a human timescale. The most widely used renewable energy types are solar energy, wind power, and hydropower. Bioenergy and geothermal power are also significant in some countries. Renewable energy installations can be large or small and are suited for both urban and rural areas. Renewable energy is oft...

Geothermal energy from deep underground is used to generate electricity. The near-constant temperature of the earth near the earth's surface is used in geothermal heat pumps for ...
