To calculate Solar Capacity Per Capita for all 27 EU countries, we need to divide the installed solar PV capacity (GW) by the population (millions) of each country.

In the first half of 2025, Germany and many other European countries generated more solar power than ever before, according to a new report published by the Fraunhofer Institute for Solar ...

Many European countries generated record levels of solar power in the first half of 2025, according to figures presented by the Fraunhofer Institute for Solar Energy Systems (ISE).

In the first half of 2025, Germany and many other European countries generated more solar power than ever before. This was offset by lower electricity generation from wind energy.

Find the most up-to-date statistics about the solar photovoltaic industry in Europe

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. In April 2022, the total global solar power capacity reached 1 TW, increasing to 2 TW in 2024. The top ...

This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more about Ember's methodology in this document.
