To recap, check to see if anything has been added to the outlet or the circuit that the UPS is plugged into. High power devices like space heaters, things with motors and the like can cause temporary ...

My UPS decided to die and squeal while doing it. Here is how I replaced the battery on an APC BE550G and tips on how to plug in all of those odd shaped AC adapter plugs.

Understanding the common UPS battery failures can help businesses prevent downtime, protect equipment, and extend battery life. This guide covers the most frequent UPS battery ...

I have my Back Up ES 500 UPS in a cabinet along with a fan to keep air circulating and though the fan may have started making noise but found it was the UPS. My computer was powered ...

I have a UPS from a few years ago, to my knowledge the battery is good last I checked, but Everytime I try to test it in battery backup mode, it makes a squeeling noise, shuts off AC ports on ...

I would check the battery's age. If it is more than three to five years old, it may be worn out and causing the unit to fail its "battery installed" or self tests.

It looks like it's an alarm informing about disconnected battery (accordingly to the manual), because it's continued squeaky sound with the red light blinking, but if it was a battery it should make that noise ...

This noise comes from the battery charging circuit, and it's not necessarily abnormal. The newer APC UPS models use a "switching" or pulsed approach to charging the battery, and ...
