A solar air conditioner can slash daytime energy costs, improve comfort, and keep your home running through outages--especially when paired with the right battery strategy.

OverviewPhotovoltaic (PV) solar coolingHistoryGeothermal coolingSolar open-loop air conditioning using desiccantsPassive solar coolingSolar closed-loop absorption coolingSolar cooling systems utilizing concentrating collectorsPhotovoltaics can provide either indirect solar air conditioning power or, now, directly power to air conditioners. Indirect photovoltaic power for air conditioners consists of whole-house or whole-building solar which, traditionally for most users, has also meant net metering to the grid. Solar in this case is inverted to alternating current (AC) to run the appliances in the house or building, including the air conditioner(s). The advantage of this is the air conditioners don't need any special electronics to acco...

Solar air conditioning, or "solar-powered air conditioning", refers to any air conditioning (cooling) system that uses solar power. This can be done through passive solar design, solar thermal energy ...

Solar-powered air conditioners just make sense. After all, you're most likely to use your AC when the sun is beating down on your home. This piece will review the need for solar-powered ...

Solar PV air conditioners are the most common option. They use the energy captured in photovoltaic panels to power an internal compressor and fan. The compressor and fan then circulate ...
