It contains information for EMS operations including data necessary to enable radio communications during transport operations within the state.

Most are actually mounted inside the vehicle. These devices have lower transmitting power than base stations. The unit used to measure the output power of radios is the watt.

In addition to the information contained in the transport notification, a medical "consult" is made when the primary EMS Provider conveys patient assessment information to an approved base station facility ...

In some EMS systems, simple standard communications are transmitted by pushing a button on a mobile data terminal (MDT) mounted in the ambulance. Carry portable radio whenever you leave unit.
