What are the components of a 5 G base station?

Firstly, in terms of energy equipment, the electrical component characteristics of the 5 G base station's constituent units are modeled, including air conditioning loads, power supply systems, and energy storage systems.

What is energy storage system?

The energy storage system is used to store excess electrical energy during low communication demand periods and release it during high communication demand periods, in order to balance power supply and demand, as well as improve the stability and flexibility of power supply to the various components of the 5 G base station.

What are the characteristic constraints of 5 G base station units?

1) For energy equipment, the power component characteristic constraints of the 5 G base station units, including the air conditioning load characteristic constraints ((1), (2), (3)), power system characteristic constraints (Eq. (4)), and energy storage system characteristic constraints ((5), (6), (7), (8)).

Is a 5 G base station energy-saving?

This paper proposes an energy-saving operation model of 5 G base station that incorporates communication caching and linearization techniques. On one hand, the model characterizes the electrical consumption characteristics within the 5 G base station, focusing on each electrical component.
