What is a battery cabinet?

The primary function of a battery cabinet is to safely store and charge lithium-ion batteries under controlled conditions. These cabinets act as passive and active safety systems, ensuring that batteries are isolated, ventilated, and, if necessary, extinguished automatically in case of an internal fire.

How do I know if my Li-ion battery is bad?

Do not short-circuit the Li-ion battery. Observe the positive(+) and negative(-) marks on the Li-ion battery and equipment and ensure correct use. Do not reverse the Li-ion battery. Do not dismantle, crush, puncture, open or shred the Li-ion battery.

What is a lithium battery cabinet?

A lithium battery cabinet is typically constructed from double-walled, cold-rolled steel with a fire-resistant insulation core made of materials like calcium sulphate and high-density fibre panels. These layers act as thermal barriers, withstanding external fires for up to 90-120 minutes, giving responders critical time to react.

How to check battery status?

The battery status can be obtained and the battery internal parameters can be modified via a host computer. CAN communication Terminal (RJ45 port) follow CAN protocol, to output batteries information. RS485 Communication Terminal:(RJ45 port) follow RS485 protocol, to output batteries information.
