This section only applies to the few manufacturers that have been issued a LNO for their battery charging cabinets, enclosures, or racks, from the FDNY in March 2025 or earlier.

e is the heart of NFPA 70E for battery workers. This Article requires that a battery risk assessment must be performed prior to any work to identify the chemical, electrical shock, and arc flash hazards

The UL 9540A testing shows that the manufacturers installation and spacing recommendations included in these products" Quick Installation Guides (QIG) are adequate and ...

Working space shall be measured from the edge of the battery cabinet, racks, or trays. For battery racks, there shall be a minimum clearance of 25 mm (1 in.) between a cell container and any wall or ...

A well-designed lithium ion battery cabinet includes features like fire-resistant materials, proper ventilation, and integrated safety mechanisms. These features help mitigate risks associated with ...

Safety requirements for batteries and battery rooms can be found within Article 320 of NFPA 70E

The battery room shall be located in a way that provides access for lifting equipment to be used during initial installation and future maintenance operations. The location shall be as free from vibration as ...

Clearance refers to the empty space you must maintain around the battery cabinet. This space allows for adequate airflow, safe maintenance access, and separation from potential hazards.
