What should I do if my solar system is not working?

Maintenance & Cleaning: Clean your system and ensure it is free of dust, dirt, leaves, or other debris that will block sunlight and lower your system's energy production. **Roof & Installation Quality:** If the panels are not mounted or installed correctly on the rooftop, their lifespan can be drastically diminished.

Should you replace solar panels before the end of life?

More data is needed to understand when, why, and what volumes of solar panels are reaching end of life, but weather damage and installation errors are expected to accelerate end-of-life issues. There are many considerations on whether to voluntarily replace solar systems before their end of life.

Should I upgrade my solar panels before the warranty period expires?

Some consumers and plant operators may choose to upgrade their solar panels before the warranty period expires or to take advantage of technological improvements--a practice known as repowering. **Why Is PV End-of-Life Management Important?**

Should asset owners repower solar PV systems?

In response, asset owners are increasingly turning to repowering solar PV systems: the process of replacing or upgrading aging solar infrastructure to improve performance, ensure compliance with updated standards, and extend system life.

When solar panels, which typically have a lifespan of more than 25 years, reach the end of their lives and become a waste stream, they must be managed safely. Find information here about ...

As solar cells age (typically after 20-30 years), their efficiency can decrease significantly. Regular performance evaluations facilitated by professionals can help identify issues such as dirt ...

In this guide, we'll walk you through the solar panel life cycle, what happens when they're no longer efficient, the current state of recycling in the U.S., and what's being done to improve ...

Some 23 GW of U.S. solar farms contain inverters that will need to be replaced over the next five years. But repowering might not unfold in the solar industry the same way it did for wind.

Is your solar system underperforming? Learn when repowering solar PV systems makes sense -- and how GSES can help assess, upgrade, and optimise your system.

There are many considerations on whether to voluntarily replace solar systems before their end of life. Some consumers and plant operators may choose to upgrade their solar panels before the warranty ...

Excessive snow, heat, or rain can age your system in advance. Proper maintenance and cleaning can boost output by 5 to 10 percent by getting rid of the debris that impedes sunlight. Bad ...

Solar panels are designed to provide clean energy for many years, but several factors influence their performance beyond the 25-year mark. Understanding these elements helps owners ...
