Solar power is the fastest-growing renewable energy source in the world. But what country uses the most solar power? The leader in solar energy is China, at 306,973 MW total solar capacity, but that's ...

China uses the most solar power of all countries in the world. In addition, China produces the vast majority of raw materials and finished products in the solar industry, accounting for nearly 85% of all ...

Among the frontrunners in solar installations, China has emerged as a global leader. Its extensive solar farms, governmental support, and investment in solar technology production have ...

Besides electricity generation, solar power is used in various other applications, including solar water heating, solar thermal power plants, solar-powered transportation (electric vehicles and ...

China dominates the solar energy sector, producing 77.8% of the world's solar panels and possessing 393GW of solar capacity in 2022. According to the International Energy Agency (IEA), ...

Which countries have the most installed solar PV? Solar energy is used all around the planet, but currently, China, Japan, and the United States lead the world in terms of total installed ...

Explore which countries use solar energy the most and how global solar power adoption continues to grow across regions in 2026.

About this data Electricity generation from solar power Figures are based on gross generation and do not account for cross-border electricity supply.
