---

The training bench is composed of solar panel, battery, controller, inverter, DC load (DC motor), AC load (AC motor), solar lamp, movable platform bracket and teaching board.

This is the 800MW photovoltaic power generation project of China Resources Finance, Gold and Red Light Fishery. It can generate electricity from above and farm it from below.

The training covered a wide range of topics, including the fundamentals of PV mounting, design principles, installation processes, and the latest market trends.

Our team is committed to providing first-class business training events, ensuring that each worker learns to accurately and proficiently install different types of photovoltaic mountings.

Imagine trying to build a house of cards in a wind tunnel - that's what photovoltaic bracket design feels like without proper software. Enter PKPM, China's structural engineering powerhouse that's been ...

This course doesn't just cover the theory you will also get hands on experience of fitting solar PV equipment and is designed to provide the necessary skills for the design, installation, testing, ...

The training session is packed with information about system design basics, grid tied solar PV system installation, battery based solar PV systems, energy efficiency measures, and ...

As the global transition to renewable energy accelerates, such training is crucial for the development of the photovoltaic industry and sets a new benchmark for future international ...
