With a total installed capacity of 400 megawatts, the wind farm project will be able to generate 1.6 billion kWh of electricity annually, meeting the annual electricity consumption needs of 680,000 households ...

Here the authors evaluates current grid integration capabilities for wind power in China and find that investment levels should be doubled for 2030, and that long-term storage and...

Wind power could soon come from the sky as China has successfully tested a megawatt-class airborne turbine that generates electricity while hovering 2000 metres up.

China's first offshore wind power project that entirely uses ultra-large-capacity wind turbines achieved full-capacity grid-connected power generation on Thursday in Zhangzhou, Fujian province.

The grid connection and operation of this project are pivotal to promoting the high-quality development of large-scale domestically produced equipment for offshore wind power in China.

The phase II project of Zhangpu wind farm, China's first offshore wind farm with the largest single-capacity turbines, was connected to the grid for power generation on Thursday.

Our Smart Grid system can be applied in various energy systems such as wind power, photovoltaic power generation, energy storage system and other kinds of distributed power supply. Our smart grid ...

An object shaped like an inflatable airship was seen floating over Yibin, Sichuan Province in Southwest China earlier this month. Turns out, it wasn't some unidentified object. In fact, it was an ...
